#title Analysis of three nodD genes in Rhizobium leguminosarum
biovar phaseoli; nodD1 is preceded by nolE, a gene who
product is secreted from the cytoplasm.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Fri Dec 18 18:12:41 1998; MasPar time 25.51 Seconds 998.601 Million cell updates/sec

Tabular output not generated.

Description: Perfect Score: Sequence: >US-08-951-733-14 (1-949) from US08951733.pep (1 of 2) 7113

1 HASGQRCVLLRTWEALAPAT.....PVEDEALGGTAFVQMPAHGL 949

Scoring table: PAM 150 Gap 11

Searched: 74019 seqs, 26840295 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot35 1:swissprot

Statistics: Mean 54.986; Variance 96.850; scale 0.568

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Tabular output not generated. Fri Dec 18 18:37:59 1998; MasPar time 18.72 Seconds 800.790 Million cell updates/sec

Description: Perfect Score: >US-08-951-733-14 (640-940) from US08951733.pep (2 of 2) 2214

Sequence: TSRLRFIPKPDGLRPIVNMD......NLRKTVVNFPVEDEALGGTA 301

Scoring table: PAM 150 Gap 11

Searched: 165420 segs, 49795644 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Statistics: Mean 47.179; Variance 86.093; scale 0.548

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The gall gene product (P70274) is known as galactose-1-phosphate
widyltransferase (transferase) the gall gene product (P70275) is
known as wridine diphosphogalactose-1-phosphatese (spinorase), and the
galk gene product (P70275) is known as galactose-1-phosphates (galactokinase). The inventors claim an TDN molecule comprising all
or part of a Streptomyces gal operon used for the expression of
coreign DNA in a transformed micro-oryanism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       12

PT New recombinant constructs for transforming plants of E. coli.

PT contra, nucleic acid encoding jojoba embryo long chain fatty

PT acyl-CoA reductase.

PS Claim 20: Pigure 1: JOpp: English.

CC The sequence encoding the jojoba embryo long chain fatty acyl-CoA

CC The sequence encoding the jojoba embryo long chain fatty acyl-CoA

CC The sequence encoding coli. Such constructs which in turn can be

CC used to transform E. coli. Such constructs are useful for the

CC used to transform E. coli. Such constructs are useful for the

CC used to transform E. coli. Such constructs are useful for the

CC used to transform E. coli. Such constructs

CC 1 host cells. The enzyme cattalyses the formation of a fatty

SQ Sequence 431 Ai.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match 0.7%;

                                                                                                                                                        developmental stag-specific, occurring during flower stage ) to stage 2 of anther development. A method is claimed for production of male sterile plants by reducing anther specific occast settings, transgenic plants and complianted by expressing in at least the anthers of a transgenic plants occast nucleic acid, preferably is antisense of crientation. Induction of male sterility can reduce hybrid plants production costs and enables production of hybrid plants with reduced policy impossible. It also enables production of plants where this with reduced policy formation, to reduce also give reactions to such plants or to extend the life of flowers that servere upon belints or to critical plants or to reduce also give reactions to such plants or to extend the life of flowers that servere upon services of the politication, e.g. orchids. Lily CCaME (see W0018) has also been sequence 517 AA:

obd, from corporabacterium glutanicum strain odding
phesphoenolpyruvate carboxylass.
Disclosure: p. English.
ppc is important as a key ensyme in the anapierotic
and increasing oxaloacetate levels, it indirectly in
levels of L-Ma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          436 relseae 442
